Intro

Which of the following happens to the production of insulin and glucagon immediately after a high-sugar

meal? A. Increase in insulin, increase in glucagon

In the old 5-kingdom classification system, Euglena was classified as a member of the kingdom A. Animalia

B. Plantae C. Fungi D. Protista

Which of the following biomolecules contains ester bonds? A. Hemoglobin B. DNA C. Phospholipids D.

Cellulose

Gastrulation of the blastula during embryonic development leads to the formation of

An unripe apple was placed inside a plastic bag with a banana that is just beginning to ripen. The plastic bag is then sealed. After a few days, the apple following hormones is primarily responsible for this ripening effect? A. Auxin B. Ethylene C. Cytokinin D. Gibberellin

Twins that develop from two different egg cells are

What happens when the epiphyseal plate of the tibia is un-ossified?

HIV (Human immunodeficiency virus) can be transmitted by the following EXCEPT

Cell A has centrioles while Cell B has a nucleus and a plasma membrane. Which of the following is true? A. A is a prokaryotic cell; B is a eukaryotic cell B. A is either a plant or a prokaryotic cell; B is a

Which of the following is NOT a component of the Theory of Natural Selection?

A fossil was obtained and observed that it has a backbone, a scaly tail, and walked on two feathery feet. This organism is closely related to A. An amphibian and a fish B. A mammal and an amphibian C. A reptile and a fish D. A reptile and a bird

Which of the following blood plasma components would be least likely to diffuse easily through a lipid bilayer?

Humans normally have a total of 46 chromosomes in skin cells. How many autosomes would be expected in a kidney cell? A. 23 B. 47 C. 44 D. 46

Which of the following disorders is a result of the non- disjunction of autosomal chromosome pairs during meiosis?

To protect a farm animal from a plant toxin, a gene for resistance to the toxin was transferred to the farm animal. Which term best describes this process?

The commercial production of insulin has been achieved through the help of genetic engineering. Which of the following produces insulin using this technology?

What might happen to a community when a foreign species is introduced? A. The native species would disappear. B. The biodiversity of the community would be

The large oak trees that follow smaller trees like birch and pine in ecological succession, most likely belong to a

The greatest amount of photosynthetic activity on earth occurs in which region?

Which of the following best describes the vegetation commonly found in the taiga biome?

Parenchyma cells are found in which pair of plant tissues?

Most tap roots grow downward in response to gravity. This is known as A. Negative gravitropism

Which part of the brain is responsible for controlling balance and regulating motor movement?

At some stage of embryonic development, ALL chordates have A. Pharyngeal slits, a notochord, and a neural tube B. Pharyngeal slits, vertebral column, and a neural

Which of these organisms uses light energy to manufacture organic molecules for itself?

A population of Tamaraws experiences an increase in number over time. Which of these statements about that population is true? A. The population may experience straight-line growth. B. The carrying capacity of the population may decrease. C. The population may experience exponential growth. D. The population may face increased competition for

The reason why cyanide poisoning kills so quickly is that it brings cellular respiration to a stop. Cyanide works by attacking an enzyme involved in

When you exercise vigorously, anaerobic glycolysis occurs in your muscle cells. In such a situation, the oxidation of glucose results in the formation of

During the last stages of cellular respiration, hydrogen ions move through the inner mitochondrial membrane, from higher to lower concentrations, by attachment to a protein. This type of movement describes A. Facilitated diffusion B. Active transport C. Osmosis D. Simple diffusion

Given two fruit bats, one from Luzon and one from Mindanao. To see if they belong to the same species, a biologist must determine whether or not A. They can reproduce to form viable, fertile offspring B. Their external features are very similar. C. They eat the same species of fruit. D. Their habitats are the same

Which pair of animals is the most flexible? A. Electric eel and moray eel

What occurs in the deepest layer of the epidermis?

Excoriation is an obsessive-compulsive condition where someone repeatedly
