Guide to Helicopter/ship Operations

First published in 1971, these Guides provide invaluable information on thousands of commercial ports and terminals across the globe. They are compiled and published annually by LR OneOcean, whose years of global maritime experience allows them to provide expert and innovative solutions that enhance efficiency, sustainability, and overall industry success. The Guides cover a significant geographical breadth, and the most recent volume includes information on over 12,500 ports, harbours and terminals worldwide. These are fully indexed and contain detailed port plans and mooring diagrams.

Originally published in 1987, this book provides a comprehensive manual to the international law governing accidents at sea during the 1980s. It is a complementary study to International Maritime Organisation, now recognised as a standard work on this UN agency. Among the subjects covered in Part 1 are: reporting and investigation of accidents; accidents caused by collision; civil and criminal liability; accidents caused by non-marking wrecks. Part 2 deals with the consequences of accidents and contains a considerable body of law and regulations on oil and chemical pollution, salvage and personal injury

Ship Management: Theory and Practice unpacks the complexity of this crucial maritime activity by spelling out its key elements and the connections and linkages between them. Opening with an introduction and an overview of the special characteristics of ship management, the text then focuses on different strands of management. It offers dedicated chapters on strategic management, commercial management, operations management, technical management, human resource management and compliance management, weaving in numerous international examples throughout. The final chapter looks to the future, exploring the challenges facing ship management and the impact of digitalisation. Ship Management: Theory and Practice is a valuable resource for upper-level students of shipping management and maritime operations and can also serve as a one-stop reference for researchers and industry practitioners.

Ideal for Merchant Navy Officers from Cadet rank to Master Mariner, the fifth edition of this highly

respected book is in full colour, and has been updated to include more information on topics as diverse as electronic navigation and AIS technology whilst still including essential information on subjects such as safety at sea, rescue operations, watchkeeping duties and pollution control. It covers international standards and works well on courses throughout the world. Seamanship Techniques is written for serving mariners and nautical students from cadet to master level, studying for professional marine qualifications under the International Maritime Organization as per STCW requirements. Used by training establishments around the world, this best seller is the only reference to both shipboard practice and ship operations that seafarers will need.

Handbook for Marine Radio Communication 5E

This book covers the knowledge of shipboard operations required by candidates for professional qualification as Chief Officer and Master Mariner. It deals with the basic routines and procedures, and the many regulations governing their use, for the safe and efficient operation of merchant ships. The book is also designated a fundamental text for the Maritime Transport paper of the Chartered Institute of Transport's membership examinations. The second edition takes into account recent developments in technology and regulation, and in particular covers major international legislation on Safety of Life at Sea and on Maritime Pollution as well as recent UK regulations on occupational health and safety and on operation of ro-ro ferries.

Surface Ship Operations

The National Wildfire Coordinating Group provides national leadership to enable interoperable wildland fire operations among federal, state, local, tribal, and territorial partners. Primary objectives include: Establish national interagency wildland fire operations standards. Recognize that the decision to adopt standards is made independently by the NWCG members and communicated through their respective directives systems; Establish wildland fire position standards, qualifications requirements, and performance support capabilities (e.g. training courses, job aids) that enable implementation of NWCG standards; Support the National Cohesive Wildland Fire Management Strategy goals: to restore and maintain resilient landscapes; create fire adapted communities; and respond to wildfires safely and effectively; Establish information technology (IT) capability requirements for wildland fire; and Ensure that all NWCG activities contribute to safe, effective, and coordinated national interagency wildland fire operations. The objectives of the \"Interagency Helicopter Operations Guide\" (IHOG) are to: Promote safe, cost-efficient and effective aviation services in support of agency and interagency goals and objectives; Define and standardize national, interagency helicopter management and operational procedures for helicopter users from participating agencies; Through standardization, facilitate the ability of personnel from different agencies to work cooperatively on incidents or projects; and Provide a framework within which areas, regions, states, and local units can provide supplemental, site-specific guidance. The procedures contained in this guide apply to helicopter operations conducted by providers and users of helicopters from participating agencies. This guide addresses both incident and resource helicopter operations.

What lies behind the human attraction to violence? Why do we glorify war, seeing it as an almost sacred undertaking? Barbara Ehrenreich is known for the originality and clarity of her thinking, and in *Blood Rites* she proposes a radical new theory about our attitudes to bloodshed. From the trenches of Verdun to today's front lines, Ehrenreich traces the history of warfare back to our prehistoric ancestors' terrifying experiences of being hunted by other carnivores. Written with wit, tenacity and intellectual flair, this is vintage Ehrenreich, and an account that will transform our understanding of human conflict.

Handbook on Marine Pollution

Planning algorithms are impacting technical disciplines and industries around the world, including robotics, computer-aided design, manufacturing, computer graphics, aerospace applications, drug design, and protein folding. This coherent and comprehensive book unifies material from several sources, including robotics, control theory, artificial intelligence, and algorithms. The treatment is centered on robot motion planning, but integrates material on planning in discrete spaces. A major part of the book is devoted to planning under uncertainty, including decision theory, Markov decision processes, and information spaces, which are the 'configuration spaces' of all sensor-based planning problems. The last part of the book delves into planning under differential constraints that arise when automating the motions of virtually any mechanical system. This text and reference is intended for students, engineers, and researchers in robotics, artificial intelligence, and control theory as well as computer graphics, algorithms, and computational biology.

Seamanship Techniques

Behavioral finance presented in this book is the second-generation of behavioral finance. The first generation, starting in the early 1980s, largely accepted standard finance's notion of people's wants as "rational" wants—restricted to the utilitarian benefits of high returns and low risk. That first generation commonly described people as "irrational"—succumbing to cognitive and emotional errors and misled on their way to their rational wants. The second generation describes people as normal. It begins by acknowledging the full range of people's normal wants and their benefits—utilitarian, expressive, and emotional—distinguishes normal wants from errors, and offers guidance on using shortcuts and avoiding errors on the way to satisfying normal wants. People's normal wants include financial security, nurturing children and families, gaining high social status, and staying true to values. People's normal wants, even more than their cognitive and emotional shortcuts and errors, underlie answers to important questions of finance, including saving and spending, portfolio construction, asset pricing, and market efficiency.
